GROWING GREENHOUSE CHRYSANTHEMUMS

For best results well rooted cuttings or young plants should be potted or planted in the bench during the month of June, at the latest by July 15. Use a rich porous soil, spacing in the bench about 8 inches apart each way. Two weeks after benching pinch the center out of each plant to make them branch. Keep soil cultivated and water as necessary. We apply liquid fertilizer at two week intervals until color shows in the bud. For large flowers limit the branches to three to the plant. When buds show allow only one to remain to each branch of the large standard varieties. Keep staked or supported for straight stems and perfect flowers.
